

FLEXIBLE CHAIN ACTION.

Triples chain life.
Enhanced with moly to plate to metal
and reduce friction.

CONTENTS UNDER PRESSURE.
See additional precautions on back panel.

KEEPS TENSION IN CHECK SO CHAINS KEEP MOVING.

Quickly produces flexible chain movement.

Quiets noisy chains.

Rejects abrasive dust.

O-ring safe. Won't affect seal materials.

Protects against rust and corrosion.

Protects chains from the inside out

Extreme loads and even everyday use can place stress on the chain's metals surfaces. Over time, this can cause chains to grow longer, vibrate, experience erratic movement and slip from sprockets. Using an extreme pressure penetrating chain lube like Moly Roller Chain Lube can help.

Moly Roller Chain Lube sprays on easily to get in between each pin and bushing to protect chain joints from wear and chain stretch. The internal parts of the chain get and stay properly lubricated. Metal surfaces are able to move smoothly without causing metal-to-metal damage. Even when chains are stuck and frozen, Moly Roller Chain Lube helps free frozen chain links and keeps them from freezing.

Heavy-duty performance in all conditions

Working in dirty and dusty environments? Moly Roller Chain forms a solid, protective film that rejects abrasive particles and dirt. This protective layer is capable of withstanding pressures up to 500,000 psi and reduces friction for longer chain life. Working in humid environments or areas where water is present? Moly Roller Chain Lube displaces moisture from the chains and forms a protective barrier against moisture. Moly Roller Chain Lube delivers solid protection against rust and corrosion.

You get thorough coverage without drippage with each application of Moly Roller Chain Lube. Can be used in high speed or medium speed roller chains, chain sprockets, sliding surfaces and overhead oven conveyor chains.

Longer chain life is possible with Moly Roller Chain.
